about the cosmetic product

GLEAM LASHES

Clinical application study under dermatological and ophthalmological control

The test product was applied during a period of 12 weeks by 24 subjects once daily on the upper lash line. From the clinical-dermatological and specialist point of view, no relevant skin reactions occurred in the test area; the product was tolerated

excellently.

Neither intolerance reactions suggestive of irritation nor allergic reactions (contact dermatitis) were detected. Accordingly, from the dermatological viewpoint, there is no high potential for irritation and sensitisation for the tested product when this is used as intended.
